FOR IMMEDIATE RELEASE FEBRUARY 29, 1980

OFFICE OF THE WHITE HOUSE PRESS SECRETARY

THE WHITE HOUSE

REMARKS OF THE PRESIDENT
AT THE
SECOND ENVIRONMENTAL DECADE CELEBRATION

The East Room

(AT 3:07 P.M. EST)

MR. SEBASTIAN: Mr. President, we are honored to meet with you and to thank you in person for your environmental achievements and your impressive record. We are proud that the Environmental Industry Council's members, manufacturers, employ some two million people. We believe that underscores your long-standing awareness that a clean environment not only is essential for health, but also is good economics. The Council appreciates your continued dedication to environmental improvement, and your unrelenting efforts to resist pressures that threaten pollution reduction goals.

Mr. President, it is a great privilege to present the environmental industry's first national leadership award. I will read, if I may: "The environmental industry of the United States is honored to present its first national leadership award to President Jimmy Carter, in recognition of his enlightened and steadfast leadership of the United States government and the nation in the realm of environmental protection and environmental improvement in all of its facets, economic, geographic, political and technological; on behalf of the Board of Directors of the Environmental Industry Council, representing manufacturers of environmental equipment and systems for the control of all forms of environmental pollution." (Applause.)

THE PRESIDENT: Thank you, Frank Sebastian, for this special award. Thank you, Gus, for setting up this celebration. The longer I am in the White House, and the more diverse and serious are the responsibilities which I feel on my own shoulders, and with which I have to deal every day, the more I am convinced of the tremendous historical nature of what has been achieved by you during this last ten years. Because of that I want to welcome you to the White House.

It is a great pleasure to commemorate together ten years of environmental achievement. This has been a decade of substantial change in the national consciousness about the fragility of our planet. This has been a decade of momentous change in commitment among literally millions of people who formerly were not motivated to join some of you leaders in a common effort. I think during this time we have turned irrevocably away from a mindless destruction of our environment. And we have committed ourselves to an immense national undertaking to protect it.

It hasn't always been easy, but the summary of what has been accomplished is sobering and gratifying indeed. It is a decade that began with the National Environmental Policy Act, which committed us to this course. Few laws in our history have so changed our land for the better. Many of you helped pass NEPA and helped make it effective. You helped to establish the Council on Environmental Quality; the Environmental Protection Agency, headed by Doug; and the National Oceanographic and Atmospheric Administration. Ten years ago the first Earth Day was a strong expression of concern by the American public. I think the outpouring of people on that day, including myself and many of you, shocked the populace, because of the expression of public support for what at that time, as it is now, was a very controversial and potentially divisive subject.

Earth Day 1980 will give us a time to reflect on our progress even more, and decide what we must do together in the future. Let me add that this year also is another historic milestone, one that reminds us of a long history of dedicated service by hundreds of thousands of private citizens, and that is the Diamond Jubilee of the National Audubon Society.

We begin the 1980s with the knowledge that citizen commitment to environmental quality remains strong. I am determined that my Administration will continue to be as environmentally progressive as any in history. (Applause.) This includes the administrations of great environmental leaders like Theodore Roosevelt and Franklin Roosevelt, and perhaps some others. I have sought out good people from the environmental community and brought them in to the government and put them to work; and I am glad to share credit with them for some of the things that have been achieved, not only for the new policies that we instituted, but also for the fact that environmental concern has now become a central and a routine and an integral part of every decision we make.

We have issued two broad environmental messages to set forth overall policy, plus other messages dealing with oil pollution in the oceans, water resources policy reform, solar energy, nuclear waste, nuclear nonproliferation, urban policy. And we have

tried to carry out those policies as well as introduce a message. In some of those areas we have tried to marshall worldwide support for the innovative and necessary policies that we have espoused. We have improved protection of marine animals, including whales, and we are making rigorous efforts to enforce the environmental laws that are on the books. Together, you and I, we will continue to protect in an increasingly effective way the Alaska lands.

This has been a productive three years for environmental legislation, thanks to many of the key members of the House and Senate who are assembled with us here today. We passed the Surface Mining Reclamation Act, a law which had been vetoed twice by my predecessors. We passed the Clean Air and the Clean Water Act amendments, which strength our basic environmental protection laws. Twice we reauthorized the Endangered Species Act. We signed into law the unprecedented National Parks and Recreation Act of 1978. And I have since proposed, as you know, large additions to our national rivers and trails and to our wilderness systems.

One of my most unforgettable experiences as President -- I have had a lot of unforgettable experiences -- (Laughter) -- this is one of the most pleasant unforgettable experiences -- was a raft trip down the Salmon River with Cecil Andrus and a group of dedicated lovers of the outdoors in one of the most priceless wilderness areas. To preserve that part of our common heritage, I proposed and I want to see enacted legislation that will protect the Salmon River and establish the River Of No Return wilderness, in Idaho.

Another American shared my desire to preserve the middle fork of the Salmon: one of America's great jurists, and one of America's great environmental leaders, the late Supreme Court Justice William O. Douglas. His widow, Cathy, is with us today, and has been carrying on his work to preserve America's wilderness areas. Cathy, would you stand just a moment? (Applause.)

It is with deep admiration and gratitude for Justice Douglas, and for you, Cathy, that I have signed a proclamation today changing the name of Alaska's Arctic National Wildlife Range. Sitting on top of the world, this wildlife range is the largest in our system. It is an extraordinary locale, as you know, and a symbol of freedom. I cannot think of a better name for it than the William O. Douglas Arctic Wildlife Range. (Applause.)

I can't think of a better symbol of freedom than the caribou and the moose, a thousand years from now, still proceeding freely in that beautiful part of the world. As Justice Douglas wished, we will continue working to insure adequate and permanent protection of Alaska's irreplacable treasures, including wilderness designation for the Douglas Arctic Wildlife Range.

We have had some notable successes in Congress. The issues are still sharply drawn. Nothing can be taken for granted. Threats still persist, and there is not a natural, automatic momentum for the protection of environmental quality and for the enhancement of the programs which all of you have espoused, and for which you have fought so long.

The Water Resources Authorization Bill, for instance, just passed by the House, is a travesty. Many of its projects are environmentally destructive. It is wasteful. It is inflationary. It is even worse than the Water Resources Appropriations Act, which I vetoed before; and with your help and support, I do not intend to allow this proposed legislation to become law. (Applause.)

There is another waste of resources that concerns me greatly, and it concerns every head of every nation on earth, some acutely, some with an increasing degree of concern, and that is the waste of energy. Energy conservation is essential, not just in a crisis, or even as a transition to renewable resources, but energy conservation has got to become a way of life. In the 1978 National Energy Act and in later acts, we have undertaken to do what future generations will recognize as a massive and fundamental shift toward energy efficiency. We have begun a momentum which I intend to sustain, and to accelerate.

The 1981 budget which I have proposed includes over $2 billion in outlays directly for energy conservation, twice what we are spending this year in 1980. And I support legislation now in Congress which will add another $6 billion to that effort to conserve energy. Conservation remains the best environmental and economic way to meet our current energy needs. Conservation is and will remain the cornerstone of our energy policy.

However, conservation alone is not enough. We must development solar and renewable energy sources, and as I have said before, no foreign cartel can embargo or set the price on power that comes directly from the sun. True energy security can only come from solar and renewable energy technologies. We must also have realistic prices for declining petroleum reserves.

Long before there was an effort to make petroleum prices competitive, environmentalists urged that those prices actually reflect the replacement cost of this resource, something that we are now belatedly putting into effect. As long as we have artificially cheap oil, waste will result; conservation will be impossible; and the development of competitive renewable energy resources will be restrained or prohibited. It is important to pursue a broad range of alternative energy sources, including synthetic fuels. We will not sacrifice the quality of our environment for synthetic or any other fuels. As you know, the Energy Mobilization Board, a highly

controversial proposal, is designed to simplify decision-making facilties. This Board should only eliminate unnecessary delays in making an objective decision, and not undermine any necessary protections. I do not support waivers of substantive environmental standards, and I do not support broad grandfather clauses that are simply substantive waivers in disguise.

On all such issues, even on those rare occasions when we have disagreed, you have had direct access to us, to me personally, and to my Administration, and your views have been heard, and almost always heeded, before and not after decisions were made. This is an open Administration. We have benefitted from your analysis, your suggestions, your counsel, and your criticisms. And I want to continue this close relationship.

You and I still have a lot of unfinished business, legislation now pending as significant as any that we have seen in the preceding decade, including Alaska lands, the proposed conservation and solar bank, nuclear and hazardous waste bills, and the National Heritage Policy Act, which will preserve our nation's most treasured resources. These are just a few among the highest-ranked in my own legislative adgenda.

Just before lunch Gus and I were discussing the long-term threats which just a few years ago were not even considered: the build-up of carbon dioxide, acid rain; the fact that 800 million human beings now suffer from lack of nourishment or disease; the fact that our population will increase 50 percent in the world by the end of this century; that we are likely to lose 40 percent of our rain forests; the fact that the oceans almost inevitably are going to be increasingly polluted; the fact that, because of erosion and the encroachment of deserts, we lose the equivalent of productive land equally roughly to an area the size of Maine every year.

These kinds of concerns affect you and me, and on some of them we have hardly begun to work on corrective action that might be proposed, much less accepted and implemented. This last decade, however, has demonstrated that we can buck the trend, that we can meet apparently insurmountable obstacles, and overcome those obstacles if we have the will and the unity which is required for success.

The past decade and its achievements point the way toward this coming decade. That is, one not of discouragement and despair and failure, but of great opportunity: to gain acceptance of innovative and common sense solutions that we have talked about for years, even to problems that seem to be almost completely insoluble. The 1980s offer vast potential for conserving energy and natural

resources that is both good environmental policy and good economic self-interest. It is time to revive some old-fashioned notions about the wise use of what we have. It is time for a society of consumers to become a society of conservers.

This tremendous change is inevitable in our country, and it has only just begun. And I believe that the 220 million Americans who are not here today will have to look to this group to a major degree to make this inevitable transition as rapid and as painless as possible. We must conserve not just petroleum, but the whole range of natural resources. We know better than perhaps any other nation on earth the value of our forests, our fisheries and our minerals, and that those seemingly limitless resources in the past have a definite limit.

We must also recognize that even our man-made communities must be conserved, and the quality of them must be enhanced. Conservation is essential to sustain the ecological diversity which is vital to the survival of human beings. We are recognizing that the conflict between resource use and resource protection is often unnecessary. The conflict between those, use and conservation, is unnecessary. The science of ecology teaches us that the natural systems yield substantial benefits to people who work with nature, and not against nature. The power of the sun, the wind, and the tides, and the protective and cleansing functions of wetlands, of flood plains and barrier islands; the use of biological test control; the role of the forest and the vegetation in maintaining the soil and the atmosphere; these are just a few examples, For the sake of future generations, we must rely more on natural processes, and on the sensitive management of renewable resources.

We are charged with the stewardship of an irreplacable environment. These are the preeminent environmental challenges of the next decade. And as our descendants look back on the 1980s, let it be said, first, that we kept our commitment to the restoration of environmental quality. Second, that we protected the public health from the continuing dangers of toxic chemicals, from pollution, from hazardous and radioactive waste, and that we made our communities safer, healthier and better places to live. Third, that we preserved America's wilderness areas, and particularly its last great frontier, Alaska, for the benefit of all Americans in perpetuity. Fourth, that we put this nation on a path to a sustainable energy future, one based increasingly on renewable resources and on energy conservation. Fifth, that we moved to protect American's countryside and coastland from mismanagment and overdevelopment, and that this year, the year of the coast, was perhaps the turning point. Sixth, that we redirected the management of the nation's water resources toward water conservation and environmental protection. And seventh, that we

faced squarely such worldwide problems as the destruction of forests, acid rain, carbon dioxide build-up and nuclear proliferation. And eight, that we protected the habitat and the existence of our own species on this earth.

That list, which may not be all-inclusive, is genuine progress toward realizing the American dream. That is the way we will, together, you and I, move into the 1980s. This 10th birthday will not mark the end of an environmental golden era, but the beginning of our second environmental decade that will give a better quality of life, not only to all Americans, but to all human beings. Thank you. (Applause.)

Draft Supplement — Date

Rangeland Grasshopper Cooperative Mgmt. Program — 03/28
Several
Proposed is the Rangeland Grasshopper Cooperative Management Program. The program involves the aerial application of insecticides, either malathion or carbaryl. The alternatives considered are: no control program, biological control, integrated pest management, and eradication. This statement supplements draft EIS, #791277, filed 12-28-78.
(USDA-APHIS-ADM-79-1D)
(EIS ORDER # 800229)

Forest Service

Draft — Date

Competing Vegetation, Management Methods — 03/11

Programmatic Several
Proposed is the management of competing vegetation on National Forest lands throughout Oregon and Washington and in Siskiyou and Del Norte Counties, California. In addition to no action, chemical, mechanical, biological, manual and thermal management methods are considered. This is a programatic statement for which site-specific environmental analysis will be prepared.
(EIS ORDER # 800172)

Final — Date

1980 Maine Cooperative Spruce Budworm Suppression — 03/14

Maine
County: several
Proposed is the 1980 Cooperative Spruce Budworm Suppression Program for the State of Maine. The Counties involved are Aroostook, Piscataquis, Somerset, Penobscot, Washington, Franklin, Oxford and Hancock. The alternatives consider: 1) biological insecticide treatment on 1.66 million acres, 2) small landowner management assistance, 3) chemical and

biological insecticide treatment on 3.5 million acres, 4) chemical and biological insecticide treatment on 1.66 million acres with protection management, 5) biological insecticide treatment on 250,000 acres with protection management, and 6) no Federal assistance. Alternative six has been chosen as the recommended plan. (USDA-FS-80-01)

Sheyenne National Grassland, Land Mgmt., Custer NF 03/04

North Dakota
County: Ransom Richland
Proposed is a land management plan for the Sheyenne National Grassland located in the Custer National Forest, Ransom and Richland Counties, North Dakota. The Grassland encompasses 70,180 acres, use of which has been centered around livestock grazing. The alternatives considered include: 1) continuing current management; 2) emphasizing wildlife, recreation and other amenity values; 3) emphasizing commodity production; 4) balancing livestock production with consideration of amenity values; and 5) reflecting management of the area if a dam were constructed.

River Bend Nuclear Power Station Unit 1, Trans. — 03/21

Louisiana
County: West Feliciana
This document supplements an NRC final EIS, #41491, filed 9-30-74 which has been adopted by the USDA/REA. Proposed is assistance for the purchase of undivided ownership interests in the River Bend Nuclear Power Station Unit 1, West Feliciana Parish, Louisiana. Assistance may also be used for construction of related transmission facilities which extend through several parishs. The unit will consist of a boiling-water reactor, and two steam turbine generators. Exhaust steam would be cooled by mechanical cooling towers using make-up water obtained from and discharged to the Mississippi River.

Middle Creek Watershed Project, Multipurpose — 03/10

Pennsylvania
County: Snyder Mifflin Union
Proposed is the installation of remaining works of the Middle Creek Watershed Project located in Snyder, Mifflin and Union Counties, Pennsylvania. The remaining works are: accelerated land treatment measures; a multipurpose dam containing floodwater retarding storage, a recreation pool, and basic recreation facilities; multipurpose dam containing floodwater retarding storage and municipal water supply; a floodway at Beaver Springs; a dike at Middleburg; and addi-

tional basic recreation facilities. The alternatives considered include: floodwater retarding dams, channel modification, floodway, nonstructural measures, and no project. (USDA-SCS-EIS-WS-(ADM)-80-1-(F)-PA)

Draft — Date

Seward Small Boat Harbor, Navigation Improvement — 03/20

Alaska
Proposed are navigation improvements for the Seward Small Boat Harbor in Seward, Alaska. Plan A consists of extending the existing north-south breakwater, creating a new entrance channel, removing a section of the existing breakwater, and dredging a mooring basin. Plan B consists of breakwater enclosure, a dredged entrance channel, and a dredged mooring basin.
(Alaska District)
(EIS ORDER # 800203)

Port of Miami Expansion, Biscayne Bay — 03/07

Florida
County: Dade
Proposed is approval of an application for the expansion of the Port of Miami in Biscayne Bay, Dade County, Florida. The plan would involve the sequential development of passenger and cargo facilities which will include: 1) expansion of Dodge Island incorporating Lummus and Sams Islands, 2) dredging of a new channel and deepening and widening existing channels, 3) the creation of Dodge Island by bulkheading and filling. When completed the Port of Miami will have been expanded by 284 acres to provide total area of 522 acres.
(Jacksonville District)
(EIS ORDER # 800166)

Below Red River Flood Control — 03/12

Louisiana
County: Avoyelles
Proposed is a flood control plan for Below Red River in Avoyelles Parish, Louisiana. The recommended plan includes construction of a levee along with a pumping plant and drainage outlet to the Red River through the oxbow lake that will be created by Lock and Dam No 1 on the Red River. The levee will be 10.4 miles in length. In addition improvements will be made to the existing Moncla to Lake Long levee and 2 miles of interior channel will be con-

structed to route drainage to the outlet.
(Vicksburg District)
(EIS ORDER # 800181)

DRAFT

North Chillicothe Flood Control, Scioto River 03/04

Ohio
County: Ross
Proposed is a flood control plan for North Chillicothe, Ross County, Ohio. Three plans have been selected for consideration. Plan 1 involves a flood control levee with essential components for flood protection. Plan 2 would also involve a flood control levee along with recreational and environmental measures and developments. Plan 3 consists of a nonstructural solution of flood plain use change.
(Huntington District)
(EIS ORDER # 800156)

Presque Isle Peninsula Beach Erosion, Lake Erie 03/03

Pennsylvania
County: Erie
Proposed is a beach erosion control project for Presque Isle Peninsula located on Lake Erie, Erie County, Pennsylvania. The selected plan would consist of 58 offshore breakwater segments extending from the west end of the peninsula through Sunset Point. Other plans considered include: 1) no action; 2) 37 rubble mound groins and modification of 11 existing groins; 3) sand trap recirculation consisting of a breakwater, sand trap, and pipeline.
(Buffalo District)
(EIS ORDER # 800155)

Marshall Island Docks, Pacific Islands 03/25

US Territory
Proposed is the Marshall Island Docks project located in the US Trust Territory of the Pacific Islands. The project consists of the construction of new piers on 14 islands and upgrading and extension of the existing dock on one island. The piers are pile-supported, reinforced concrete structures requiring no dredging or fill. The alternatives considered were: 1) no action, 2) site locations, and 3) design.
(Pacific Ocean Division)
(EIS ORDER # 800215)

Final Date

Large Unnamed Creek, Loves Park 03/04

Illinois
County: Winnebago
Proposed is a flood prevention plan for Large Unnamed Creek in Loves Park, Winnebago County, Illinois. The recommended

plan consists of 15,500 l.f. of concrete and 2,400 l.f. of riprap channel improvements; use of 66 acres of existing gravel pits for ponding purposes with installation of a pumping station and a gravity outlet; removal of 9 bridges; and construction of 4 new bridges. Alternatives include: 1) no action, 2) non-structural solutions of flood plain evacuation, flood proofing, and flood insurance; and 3) structural measures of channel improvements, underground conduits, and reservoirs.

Belle River Power Plant, St. Clair River 03/18

Michigan
County: St. Clair
Proposed is the construction and operation of a 1,328 mega- coal-fired electrical generation facility on the St. Clair River, St. Clair County, Michigan, at the existing St. Clair Power Plant site. Water for the proposed once-through cooling system would come from, and be discharged to, the St. Clair River via pipeline. Land designated for the facilities consists of approximately 942 acres in China and East China Townships. In addition to the two generating units, the project will require two 665-foot stacks, air pollution control equipment, coal and material storage areas, ash basins, a waste material storage area and river intake and discharge facilities. Lake of the Ozarks 161 kV Transmission, Permit — DATE 03/25

Missouri
County: Camden
Proposed is the issuance of a permit for the construction and installation of a 161kV, three phase, five-wire overhead electric transmission line across the Osage River and the Niangua River on the Lake of the Ozarks in Camden County, Missouri. The purpose of the line is threefold: 1) to provide a source of energy for present and future demands, 2) to provide loop integrity for both the Sunrise Beach and Lakeview Substations to insure continued operation in the case of a failure, and 3) to meet long-range loop requirements of connecting the Southern and Northern Missouri networks.

Chena River Lakes Flood Control — 03/14

Alaska
Proposed is a flood control plan for the Chena River Lakes near Fairbanks, Alaska. This statement supplements a final EIS, #721088, filed 10-27-71. Plan 1 consists of a levee crossing a major channel of the Tanana River protected by three L-shaped groins requiring a pilot channel. Plan 2 also consists of a levee, protected by four L-shaped groins requiring the pilot channel. Plans 4 and 5 consisting of an on-land levee alignment requiring either a pumping plant or excavation of additional interior drainage channels.
(Alaska District)
(EIS ORDER # 800191)

Dickey-Lincoln School Lakes, Dickey (DS-1) — 03/07

Maine
County: Aroostook
This statement supplements a draft EIS, #781339, filed 12-18-79 concerning the Dickey-Lincoln School Lakes project. This statement proposes the acquisition and management of 112,370 acres of lands in the Allagash River watershed, and an additional 500 acres along the St. John River in Aroostock County, Maine. This land would be managed for endangered species mitigation. The brook trout fishery that would remain in the project area after implementation would be managed for maximum native potential.
(New England Division)
(EIS ORDER # 800167)

Final Supplement

Shidler Lake, Salt Creek, Section 404 (FS-1) — 03/19

Oklahoma
County: Osage
This statement supplements final EIS, #51660, filed 11-13-75 concerning the construction of Shidler Dam, a multipurpose project on Salt Creek, Osage County, Oklahoma. This supplement is an evaluation of the effects of discharge of dredged or fill material into the waters of Salt Creek during the construction of an earthern dam and the relocation of a section of a County road.
(Tulsa District)
(EIS ORDER # 800201)

Final Supplement — Date

Big Pine Lake and Creek, Regulatory Exemption — 03/21

Texas
County: Red River
This statement supplements a final EIS, #51424, filed 9-22-79. Proposed for regulatory exemption is the placement of dredged or fill material into the water of Big Pine Creek of Big Pine Lake located in Red River County, Texas. This action is in conjunction with the construction of Big Pine (earthen) Dam and the relocation of four sections of two County roads totaling approximately 2.9 miles. Fill material would be obtained from the flood plain of Big Pine Creek and from borrow areas in adjacent terrace deposits.

Atlantic Bluefin Tuna Fishery — 03/07

Atlantic Ocean Gulf of Mexico Regulatory
Proposed is the revision of regulations governing the Atlantic and Gulf of Mexico Bluefin Tuna Fishery. The management plan would include: 1) vessel allocation of bluefin tuna within the purse seine fishery, 2) tagging and subsequent recapture of tagged fish within the purse seine fishery, 3) changes in the catch rate and separate quotas within the handgear fishery, 4) tuna dealer reporting, and 5) restrictions on the sale of tuna at sea.
(EIS ORDER # 800168)

Point Reyes-Farallon Islands Marine Sanctuary — 03/21

California Regulatory
Proposed is the designation of the waters around Point Reyes and the Farallon Islands as a marine sanctuary. The sanctuary would extend shoreward to the seaward boundary of

the Point Reyes National Seashore and seaward 3 nautical miles beyond territorial waters. Specific regulations are proposed which would apply only within the sanctuary boundaries. In addition to requiring sanctuary review and certification for the laying of pipelines, the following would be prohibited: hydrocarbon exploration, discharges, construction on or alteration of the seabed, unnecessary operation of vessels, disturbing marine mammals, and removing or disturbing historical resources.
(EIS ORDER # 800205)

Draft

Connecticut Coastal Mgmt. Program, CZM 03/28

Connecticut
Proposed is a coastal management program for the state of Connecticut. The major components of the program include: 1) management of coastal land and water resources, 2) management of coastal uses, and 3) management of governmental programs that effect the coastal area. Other features will include: 1) implementation of special management techniques for certain areas; and 2) implementation of special planning procedures in the areas of shoreline erosion, shore front access and protection, energy facilities, and dredging and disposal of dredged materials.
(EIS ORDER # 800224)

Reef Fish Resources of the Gulf of Mexico 03/13

Gulf of Mexico
Proposed is a management plan for the reef fish fishery of the Gulf of Mexico. The alternatives consider the following in conjunction with more restrictive and less restrictive components: 1) gear restrictions, 2) habitat, 3) reporting system, 4) harvest practices, and 5) area closures. The objectives of the plan are to rebuild declining stock, establish a fishery reporting system, conserve habitat, and minimize conflicts between user groups.

Sabal Point Villages PUD, Mortgage Insurance — 03/28

Florida
County: Seminole
Proposed is the issuance of HUD home mortgage insurance for the Sabal Point Villages planned unit development in Seminole County, Florida. The development would encompass 760 acres of land. Presently 421 homesites have been built, 898 homesites are in various planning stages, and a 150-acre 18-hole golf course is under construction. For the remaining 1904 homesites mortgage insurance is requested.
(EIS ORDER # 800227)

Echo Farms Subdivision, Wilmington — 03/25

North Carolina
County: New Hanover
Proposed is the issuance of HUD home mortgage insurance for the Echo Farms Subdivision located in Wilmington, New Hanover County, North Carolina. The development would contain 522 single-family detached houses and 120 townhouses. The development would also contain a golf course, tennis courts, a clubhouse and pool.
(HUD-R04-EIS-78-22)
(EIS ORDER # 800214)

Homestead Planned Development — 03/25

North Dakota
County: Stutsman
Proposed is the issuance of HUD home mortgage insurance for the Homestead planned development in Stutsman County, North Dakota. The development would include 540 single-family and multifamily units on 120 acres. Insurance has been requested for 50 units to be located on an 18 acre tract to be known as Homestead III.
(HUD-R08-EIS-80-VD)
